Aquifer test analysis is an integral part of groundwater modeling, supplying critical hydraulic parameters to the model or other basic groundwater calculations. Aquiferwin32 is a sophisticated Windows program that supports the analysis of aquifer tests, slug tests, and step tests. Multiple observation wells can be analyzed individually or as a group.

AquiferTest supports both time-drawdown and distance-drawdown data. The water level drawdown data is automatically plotted on a graph for checking anomalous data points and verifying the consistency of the data. Outlying data points are easily identified and can be removed from the group with the click of the mouse.
