The DC-AC converter is a full bridge characterized by a high frequency leg switching with sinusoidal PWM and low frequency leg switching at grid frequency. The adoption of this modulating strategy allows optimization of the efficiency of the MIC in the low load part of the operating profile since a sensible reduction in switching losses is achieved.

A frequency converter, also known as a power frequency changer, is a device that takes incoming power, normally 50 or 60 Hz and converts it to 400 Hz output power. Different types of power frequency converters exist, specifically, there are both rotary frequency converters and solid state frequency converters.

STM32 PWM with variable Frequency. Posted on March 19, 2018 at 11:34 . Hi at all, I am working since some days with STM32 (+ HAL, CubeMX), because I need a Source for a PMW with variable Frequency, where f = 20..200kHz and Duty Cycle 0..100%. To realize this I started with a regular PWM with a fixed Period. That worked fine.

I am designing a SiC inverter using a 72MHz STM32F302CC with the STM32 motor control library. The desired switching frequency is 50-100kHz, depending on the device we select. Reading the motor control manual, I discovered that "the FOC loop is... executed at the PWM frequency rate (That is: once every PWM Period)."
