The suggested approach discussed in Stephanidis (Stephanidis et al., 1997) conceptualizes Intelligent User interfaces as components that are characterized by its adapting capacity at run time to make several relating communication decisions such as "what," "when," "why" and "how" for interacting with the user, all this accomplished by the use of an adaptation strategy.

Designing and Evaluating Intelligent User Interfaces
Welcome to my presentation about user interface adaptation based on users feedbacks and machine learning, my name is nesrine mezhoudi . I'm a PHD student and a research assistant in the catholic university of Louvain , I'm investigating the potential of machine learning for adaptive user interface and specially model based User Interfaces.

User interface adaptation based on user feedback and ...
Intelligent User interfaces are human-machine interfaces that aim to improve the efficiency, effectiveness and adaptation of the interaction between the user and the computer by representing, understanding and implementing models. The Intelligent User Interface Model (IUIM) consists of an architectural model (which defines the components of

Designing Intelligent User Interfaces: the IUIM Model
With the growing need for intelligent software, exploring the potential of Machine Learning (ML) algorithms for User Interface (UI) adaptation becomes an ultimate requirement. The work reported in this paper aims at enhancing the UI interaction by using a Rule Management Engine (RME) in order to handle a training phase for personalization.

Research in intelligent user interfaces has been built on such notions as natural language understanding, explanation systems, intelligent tutoring systems, ... interface adaptations. In contrast, an adaptable UI provides tools that allow the user to tailor certain aspects of the interaction in using a system [13], [34].

Adaptive User Interfaces for Intelligent E-Learning ...
In fact, AUI is an interface which adapts itself according to user's profile, platform and environment. Most of the existing work in adaptation of UI relies on manual declarative rules definition using combinations of context criteria (user experience, user motivation, age, etc.) and the interface characteristics (density, color, etc.).

An Ontology-Based Approach for User Interface Adaptation ...
Intelligent User interface (UI) challenges for usability are widely discussed, related development methods, adaptations technique, and maintainability . The research in [20] identifies main proprieties for evaluating interactive system from different scopes and provides extensive definitions of concepts.
