### Jacobian Elliptic Function Tables A

In mathematics, the Jacobi elliptic functions are a set of basic elliptic functions, and auxiliary theta functions, that are of historical importance. They are found in the description of the motion of a pendulum, as well as in the design of the electronic elliptic filters. While trigonometric functions are defined with reference to a circle, the Jacobi elliptic functions are a generalization which refer to other conic sections, the ellipse in particular. The relation to trigonometric functions

Table 22.5.1 gives the value of each of the 12 Jacobian elliptic functions, together with its z-derivative (or at a pole, the residue), for values of z that are integer multiples of  $K, i K'$ . For example, at  $z = K + i K'$ ,  $sn(z, k) = 1/k$ ,  $d sn(z, k) / dz = 0$ . (The modulus k is suppressed throughout the table.)

The twelve Jacobian elliptic functions are then pq, where p and q are two different letters in s, c, d, n. The Jacobian elliptic functions are then the unique doubly periodic, meromorphic functions satisfying the following three properties: There is a simple zero at the corner p, and a simple pole at the corner q.

Thus, there are  $4 \times 3 = 12$  Jacobian elliptic functions, namely, sn, sd, sc, cn, cd, cs, dn, dc, ds, ns, nd, nc. Each function pq(z,k) has a simple zero at corner p and a simple pole at corner q of the fundamental rectangle. For example, sn(z,k) has a zero at the point S,  $z=0$ , and a pole at the point N,  $z=jK(z,k)$ .
