Exposes management operations on the JBoss Modular Service Container, which is the dependency injection framework at the heart of JBoss AS 7. It is useful for debugging dependency problems, for example if you are integrating your own subsystems, as it exposes operations to dump all services and their current states . `jboss.naming:type=JNDIView`

Subsystem configuration - JBoss AS 7.1

In older versions of the application server, data source configuration was tied to a `*-ds.xml` file schema that you would deploy in the `deploy` directory of your configuration. In AS 7, the entire structure of the AS is different, and as you would expect, creating your own data sources is different as well.
