John Crane is an American company, now a subsidiary of Smiths Group and provider of engineered products and services including mechanical seals, couplings, hydro-dynamic bearings, seal support systems, filtration systems and artificial lift.

Mechanical Seals | John Crane

Type A & B: provides a seal at the shaft. Type C, D & E: provides a seal at the shaft surface and a friction-drive connection between the shaft and seal assembly. Spring Retainer - Positions and centers the spring, aiding the concentricity between the spring and shaft. Spring - Provides positive pressure for sealing between the sealing faces.

MECHANICAL SEAL SELECTION GUIDE - Hi-Tech Seals Inc.

The vapour pressure of a fluid becomes an important factor in seal selection when fluids are handled at temperatures near their boiling point at pumping pressure. If the temperature of the fluid is higher than 20°C below the atmospheric boiling point of the fluid, John Crane should be consulted before selection and use of a seal.
