Master Data Management And Data

Build and ensure trusted enterprise data. Enforce governance standards, improve data quality and unify data across multiple systems to build a trusted data foundation of enterprise data. Identify and group sets of duplicate records using fuzzy matching logic to create a distinct set of data.

Fast, Affordable & Scalable Master Data Managment Platform

Master data management of disparate data systems requires data transformations as the data extracted from the disparate source data system is transformed and loaded into the master data management hub. To synchronize the disparate source master data, the managed master data extracted from the master data management hub is again transformed and loaded into the disparate source data system as the master data is updated.

Master data management - Wikipedia

Master Data Management (MDM) is a method of helping organizations in linking all critical and important data to a master file. MDM is the process of the collection of best data management practices. The course starts with the overview of enterprise data and master data. An introduction of master data management, its benefits and challenges, are included in the course. A brief discussion about the classification and different types of information is also included.
