In this note I provide solutions to all problems and nal projects in the book An Intro-duction to Quantum Field Theory by M. E. Peskin and D. V. Schroeder [1], which I worked out and typed into TEX during the rst two years of my PhD study at Tsinghua University. I once posted a draft version of them on my personal webpage using a server provided by

Nevertheless, much of the lectures followed Peskin and Schroeder's An Introduction to Quantum Field Theory; and the homeworks occasionally came from of the text. To help the student who may be following the text more closely than we did, I have indicated which problems correspond to those in Peskin and Schroeder's text.

Solutions to Problems in Quantum Field Theory
I have a complementary derivation to udrv's answer, it is based on the hydro-bacteriological analogy discussed in the textbook by Peskin and Schroeder.To me, it helps to understand the physical content of Eq.(12.75) from an a somewhat different aspect. The relation between the hydro-bacteriological environment and running coupling constant is as follows $$\log(p/M) \leftrightarrow t ...

Mark Srednicki Quantum Field Theory: Problem Solutions 2 1 Attempts at relativistic quantum mechanics 1.1) β2 = 1 ⇒ eigenvalue-squared = 1 ⇒ eigenvalue = ±1. α2 1 = 1 ⇒ Trβ= Trα2 1β.Cyclic property of the trace ⇒ Trα2 1β= Trα1βα1. Then {α1,β} = 0 ⇒ Trα1βα1 = −Trα21β= −Trβ. Thus Trβequals minus itself, and so ...
