graph of a quadratic function is called a parabola. The standard form of a quadratic function is $y = f(x) = ax^2 + bx + c$, where a, b, c are constants, $a \neq 0$. The parabola opens upward if $a > 0$ and therefore has a maximum value or

$yx = -23$, we see that the y -intercept is -3 . Thus, the point $(0, -3)$ is on the graph. We can obtain a second point by choosing a value for x and finding the corresponding value for y . Let $x = 1$, then $y = -21$. Thus, the point $(1, -21)$ is also on the graph.
